

The burning of fossil fuel for generations has caused damage to our environment and the hour of reckoning has been upon us in the form of climate crisis brought on by a record rise in **GHG (Green House Gas) emissions.**

Clean energy is one of the many ways to reduce **CARBON** footprints, and create a sustainable future.

A clean energy company with a focus on **SOLAR ENERGY** we are always doing our bit to reduce GHGs, which will make this world greener and brighter.

The vision for a cleaner and healthier planet goes beyond business, and we have undertaken the following clean energy initiatives at different locations.

**Bai Jerbai Wadia Hospital for Children,
Mumbai, India**

Installing a
50.16 kWp **SOLAR ROOFTOP**
leading to annual energy saving of
72,500 kWh.

Similar clean energy project was undertaken
at the Punarvas Special School
for the Disabled in Goregaon, Mumbai.

Kenya site initiatives

Installing rooftop solar panels to **generate energy** thereby eliminating fossil fuel dependency, and reducing emissions.

Solar energy can help us settle the debt we owe to this planet, thereby clearing a path for a sustainable partnership.

**We are a part of nature,
And not apart from it.**
