

The global water shortage continues to affect millions, and conservation efforts at every level are more necessary today than ever before.

As part of our sustainability efforts, we have undertaken multiple initiatives at our project sites.

Installation of **5**
rainwater-harvesting tanks,
with an additional clean up
system at our project site.

The treatment system creates soft
water needed for module cleaning.

This initiative has been effective in reducing
dependency on external water sources like
bore wells, canals, or ponds.

**Subsequently, it has also significantly
reduced wastage.**

Integration of an automated
cleaning system using

1000+ robots,

thereby reducing water
consumption and increasing
conservation.

ABU DHABI

We are doing our bit to
conserve the resources that
we're blessed with.

STAY TUNED TO KNOW ABOUT OUR OTHER
CONSERVATION ACTIVITIES.
