

One of the leading environmental concerns currently plaguing the world is that of

waste generation and disposal

At our **Kenya site**, we have found solutions through:

Sorting and
segregation
at source

Recycling and
upcycling

Systematic and
responsible disposal

Which has further aided in:

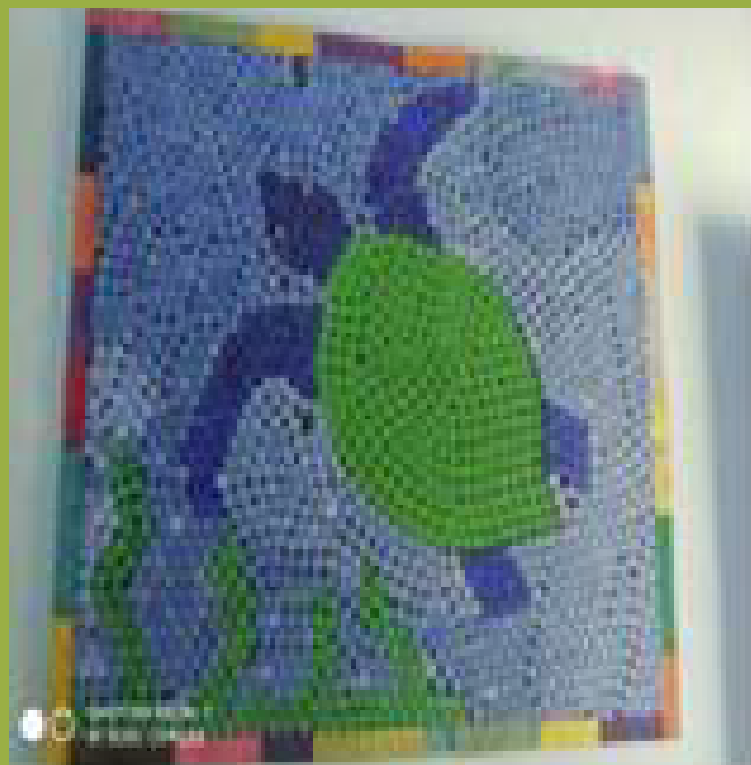

Innovation and creativity

Community participation and
engagement generation

Revenue creation through
sales of upcycled articles

At Sterling and Wilson Solar, we believe that smart management is the next best option to elimination.

Up next –
Our water conservation initiatives.
